SCOTTISH DEVELOPMENT INTERNATIONAL

For more information about Biocampus,
please contact Scottish Enterprise Edinburgh
and Lothian on +44 (0)131 313 4000.
Email biocampus@scotent.co.uk

Edinburgh Science Triangle is a partnership initiative between Roslin BioCentre, Heriot Watt Research Park, Edinburgh Technopole, Pentlands Science Park, Alba Campus, Centre for Biomedical Research, Biocampus, Midlothian Council, West Lothian Council and City of Edinburgh Council.

Biocampus

Biocampus is Scotland's first dedicated national biomanufacturing campus designed to meet the needs of companies involved in the specialist manufacture of next generation biotechnology related products.

Set in attractive woodland, just eight miles from Edinburgh city centre, a new 25,000 sq ft state-of-the-art manufacturing facility completes the first phase of development, with future plans offering specialised accommodation suitable for pilot, phase I, II and III production for clinical trials. Various development plots are also available to design your own bespoke facilities.

Organisations within the campus benefit from access to over 37 university departments and institutes involved in groundbreaking biotechnology related R&D across Scotland. The proposed Centre of BioMedical Research, linked to the new Edinburgh Royal Infirmary and the University of Edinburgh's Faculty of Medicine, will be situated close by. In addition, a wide range of support is available including innovative land and property

development solutions, skills and training, funding, business and product development. Scotland is home to over 450 life science companies and has a strong cGMP biomanufacturing community including the likes of Intercell Biomedical, Serologicals, BioReliance and Avecia. Supported by an established high quality infrastructure of professional, supplier and service organisations, Biocampus provides an integrated environment that is fully equipped for advanced cGMP biomanufacturing.
